CLAIM AMENDMENTS

1 - 2. (canceled)

- 3. (previously presented) The bone screw according to claim 12 wherein in the second screwthread portion and in the third screwthread portion every 360° several recesses are formed.
- 4. (previously presented) The bone screw according to claim 3 wherein every 360° three recesses are formed.
 - 5. (previously presented) The bone screw according to claim 12 wherein each recess extends as a chord toward the screw shank from the cutting edges of the second screwthread portion and of the third screwthread portion and joins in an arc again the respective cutting edge.

6 - 8. (canceled)

9. (previously presented) The bone screw according to claim 12 wherein the second screwthread portion comprises three turns.

10. (previously presented) The bone screw according to claim 12 wherein lengths of the cutting edges of the turns of the second screwthread portion are constant.

11. (canceled)

1 12. (currently amended) A bone screw comprising:
2 an elongated cylindrical shank having a free end and at
3 an opposite end a screw head;

shank from the free end toward the screw head and itself having

a first screwthread portion extending from the free
end toward the screw head, comprising three

[[360°]] turns, and forming a generally
continuous and smooth cutting edge,

a screwthread extending generally helically along the

a second screwthread portion extending from the first portion toward the screw head and formed of a plurality of [[360°]] turns each formed with at least one respective outwardly open recess, the recesses being of increasing angular dimension away from the free end, and

a third screwthread portion extending from the second portion to the screw head and formed of a plurality of [[360°]] turns each formed with at least one respective several outwardly open

recess<u>es equispaced every 360° </u>, all of the recesses of the third portion being of generally the same angular dimension.

- 13. (previously presented) The bone screw defined in
 2 claim 12 wherein the angular dimension of the recesses of the third
 3 portion corresponds substantially to the angular dimension of that
 4 turn of the second portion closest to the third portion.
- 1 14. (previously presented) The bone screw defined in
 2 claim 12 wherein the recesses of the third screwthread portion have
 3 a radial depth that is less than a radial height of the turns of
 4 the screwthread portion.
 - 15. (previously presented) The bone screw defined in claim 12 wherein the turns of the second and third screwthread portions are each formed with at least three of the respective recesses.
